

# The Wheeler Way - Maths INTENT

Maths lessons at Wheeler should inspire children to confidently calculate, reason and problem solve whilst seeing relationships and making connections between concepts. Children should be inquisitive and see the application to real-life.

## The subject pillars are:

Be confident in the use of methods for the calculation of the four operations, relative to their stage of development.

Be able to give reasons and explanations for mathematical decisions and present these with conviction.

Be able to solve problems intelligently and creatively.

Develop fluency through rapid recall of number facts, number bonds and multiplication (and related division) facts.

Variation through concept and procedure to allow children to truly "master" the subject strands.
